

We need a standardised digital box, with a card reader, so the end user may watch digital programing (HD) over the airwaves, via broadband (IPTV), and linked to sat receiver so the consumer can choose what he or she wishes to watch period... Please listen to the little people like me and ignore the CEO's that wish us to view democracy via gated communities.

Give freedom and choice a chance by shortening the so called last mile to zero. Give us broadband similar to our freeway system, no toll roads. We can choose & pay for the services we wish to buy over broadband. If you let the two sat guys and Comcast owne the pathway and the content, freedom of choice will vanish. Please give the local IT\ cable advisory folks more power to champion localism.

Thanks for listening.

If you read this and have a question, I'm all ears.

Bill
